

## Codelocks business development manager announced as new chair for Institute of Architectural Ironmongers

Newbury, UK, 1 May 2018 – Jo Milne-Rowe, business development manager for Codelocks, has been announced as the new national chair for the Institute of Architectural Ironmongers (IAI). The appointment was confirmed at the IAI's annual general meeting held at the Copthorne Hotel, Dudley, on 28th April.

Jo joined Codelocks in 2016 and has worked in the industry for over 20 years. She brings with her a skilled background in architectural hardware, mechanical security and electronic access control. She will be the second female chair in the IAI's history.

In conjunction with her current role at Codelocks, Jo has served as vice chair for the IAI. Prior to this, she served as chairman for the South East region. Her experience holds her in good stead as a replacement for Mario Del-Signore.

Speaking of her appointment, Jo said: "I hope that as chair of the Institute, I can play a role in changing preconceptions about the industry and encourage the next generation of talent to seek a career in our ever-changing sector."

"This is a forward-looking organisation, committed to professional standards and raising the profile of Registered Architectural Ironmongers. The Institute is its members, and I want the members to know that I'm here to listen to their thoughts and ideas for taking the IAI forward."

"Jo's appointment is excellent news for both the IAI and Codelocks," commented Colin Campbell, managing director, Codelocks. "As a business we're leading the industry in

introducing new access control technology and Jo's knowledge will be instrumental in improving the market's understanding of the capabilities and benefits of new approaches to access."

Mario Del-Signore, outgoing chair of the IAI, stated: "Jo has already been recognised for her commitment to improving communication and increasing engagement among members in her role as vice chair and in her previous position as chairman of the South East region."

"I have no doubts that she will continue to help to take the Institute from strength to strength."

control + convenience

## PRESS RELEASE

MAY 2018

### ABOUT CODELOCKS

CodeLocks designs and manufactures a wide range of innovative, standalone keyless door, locker and cabinet locks for organisations that need to control access within their buildings. The product range includes stylish push-button mechanical locks, digital electronic and wireless 'smart' locks that are easy to manage and can be operated using a keypad, card and smartphone. Convenience is at the heart of all of CodeLocks' products. Our user-friendly approach enables building and facilities managers to have complete control over who is entering and exiting. The locks are cost-effective, easy to fit and programme, can be retrofitted and do not require complex wiring or external power. We offer full access to expert technical advice and customer support.
